

WATER ACTIVATED DRINK DISPENSER

Process

- First make Popstole lane
- Then connect bowl with one metal tube
- Next put the tin foil underneath the Popstole sticks so it does not let water slip under
- then put a tube on top of the Popstole stick lane
- Next connect the bowl and the tube on the Popstole sticks so there is no space age
- Then make sure that there will be no leakage anywhere

Know you have a perfect Water Activated Drink Dispenser

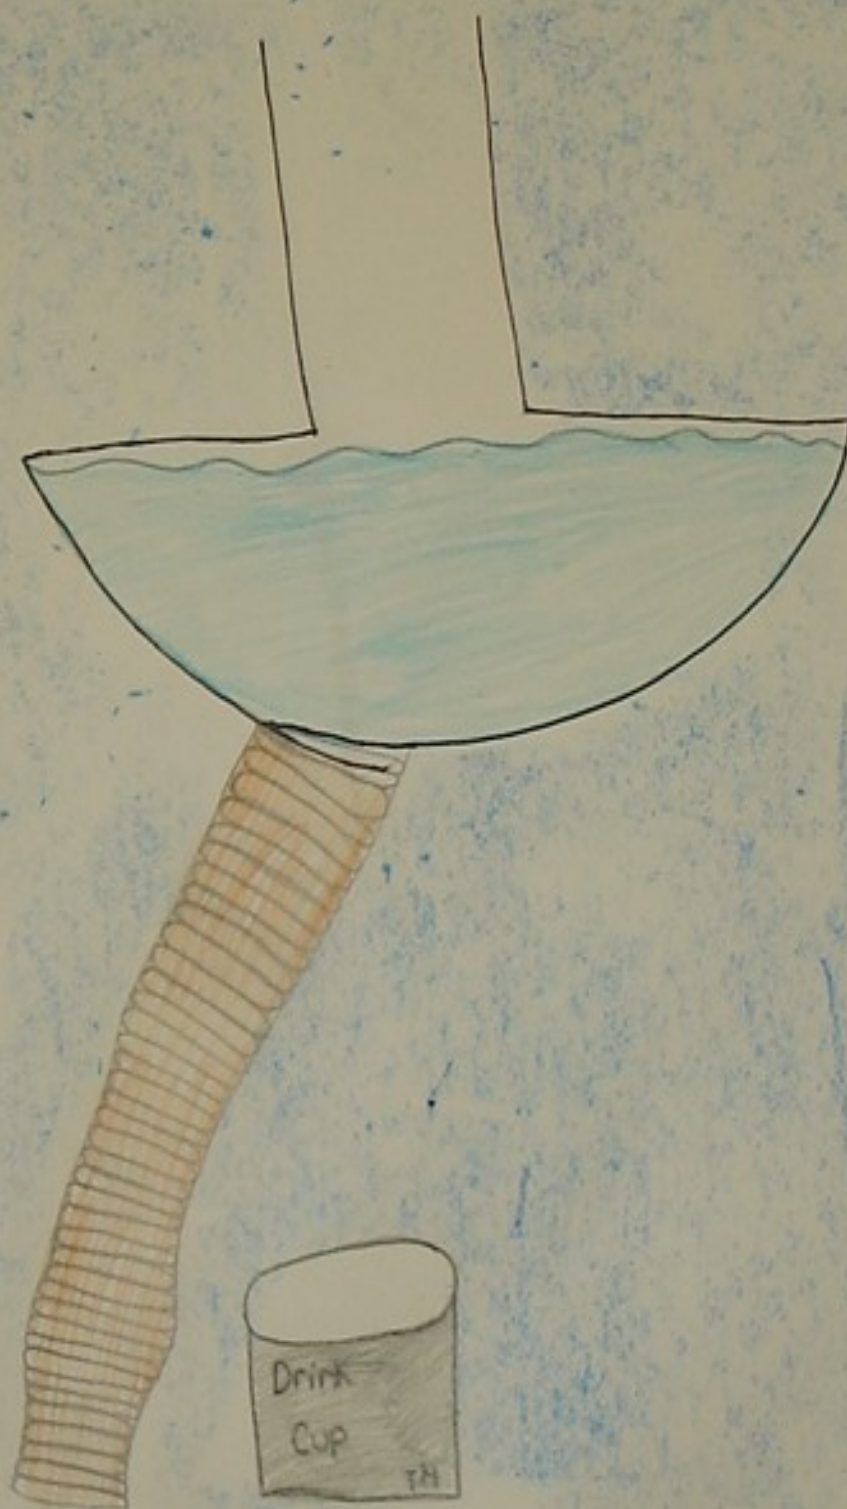

By Sydney Graham Wiseman

The Final Product

The final product should look a lot like the replica on the box. You should be able to say your favourite kind of drink and it will automatically appear. If not there there is a leakage in the system somewhere or your system is just not responding quick enough. These problems might occur sometimes because it takes a couple of seconds for the machine to process the drink that you want. If experiencing difficulty's you can take it back for a refund and get a new one. Only refundable for 30 days of purchase. If you love our product which I'm sure you will then follow us on Face book, Twitter and email. You can double your order if you call before they come out you will get 2 Water Activated Drink Dispensers. We will send you a coupon to win a third one. These would make great Christmas presents for the family. So call now at 250 567 890 to get 2 free machines and you might get a third one free.

Enjoy

Tips

- Looks tricky but if you do it in the right order your outcome will turn out good
- If you take the bowl and tape it to the metal tube right away it will be easier
- If you glue gun the popstole sticks together they will dry faster and you can put it together faster
